DETAILED ACTION

The Drawings

The proposed drawing corrections filed on August 16, 2004 have been approved. Corrected drawings in compliance with 37 CFR § 1.121(d) are required in this application. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-17 and 23-28 are rejected under 35 U.S.C. § 102(b) as being clearly anticipated by Gontin (US 5,844,685), of record.

Gontin discloses a flow cytometer (lines 13-22 of column 38) comprising a sheath flow cell (110, lines 10-34 of column 22) for forming a sample solution flow; a light source (131) for radiating light to the sample solution flow; a detecting part (164) for detecting optical information from particles contained in the sample solution flow and converting it into electric signals; and a signal processing part (lines 53-67 of column 24, lines 1-8 of column 25, lines 50-65 of column 30) for extracting fluctuation signals from the electric signals which the detecting part outputs. A stepping motor driven syringe delivers the sheath liquid to the sheath flow cell (lines 13-31 of column 34). The information is scattered light (lines 1-26 of column 21) and can

be fluorescence (lines 49-58 of column 38). The solution can be prepared using urine and the particle can be bacteria (lines 49-58 of column 38).

Allowable Subject Matter

Claims 18-22 and 29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed On August 16, 2004 have been fully considered but they are not persuasive.

In the remarks section, applicant specifies that a signal processing part eliminates or reduces low frequency fluctuation signals caused by pulsating flows generated in a sample solution or sheath liquid. Independent claims 1, 10 and 17 are silent with respect to this specific function of the signal processing part. Independent claims 1, 10 and 17 specify that the signal processing part extracts fluctuation signals from the electric signals from the detecting part. This feature of the claimed signal processing part is disclosed by Gontin (US 5,844,685). Applicant's attention is again directed to lines 53-67 of column 24, lines 1-8 of column 25, lines 50-65 of column 30 of Gontin.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR § 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Art Unit: 2877

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR § 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
